

INTERN ASSIGNMENT: LEAD QUALIFICATION CHATBOT

Duration: 7 days | Full-Stack Development

THE PROBLEM STATEMENT

Venturizer gets 500+ website based organic inbound enquiries/month from founders & investors. Currently the team manually reviews each one. We want to develop an automation tool to streamline this whole process.

WHAT YOU'LL BUILD

A conversational chatbot to be deployed on the website with a supporting ERP backend dashboard that:

- Asks 16-20 questions (different flows for founders vs investors) to capture the right amount of data for ease of enquiry handling
- Validates answers in real-time
- Stores all data in a database
- Generates qualification score (0-100) for the founder/investor as a score which defines the fitment with Venturizer
- Shows Venturizer team a dashboard to filter & view leads

DATA YOU'LL COLLECT

Founders: personal information • Contact information • background • problem • MVP status • traction • team • funding ask • validation evidence

Investors: investment thesis • stage focus • cheque size • current portfolio • support model • deployment timeline

SCORING BUCKETS

- 80-100 (Hot): Immediate outreach + program
- 60-79 (Good): Standard follow-up
- 40-59 (Maybe): Request clarification
- 0-39 (Low): Polite rejection

TECH STACK

- Frontend: React + Tailwind CSS
- Backend: Node.js/Express OR Python/FastAPI
- Database: PostgreSQL
- Deploy: Vercel (frontend) + Railway (backend)

DELIVERABLES

- GitHub repo (clean code + tests)
- README with setup instructions
- Conversation flow diagram
- Database schema
- API documentation
- 15-min demo presentation
